

April 17, 2000 - Testimonial on Osteoporosis and Cholesterol

From: Betty McGuire, Lindsay, Ontario, Canada

To: Immunotec Research Ltd., Montreal, Canada

Hello there,

I am a woman in my sixties. Three years ago following a sore neck, I was diagnosed with osteoporosis. In fact, I was diagnosed with a 30% bone density loss. The specialist put me on Fosamax (10 mg. daily) which helps build bone density and prevent bone loss.

In the first year, my bone density increased by 1%. Two years from the time I started taking Fosamax, my stomach became irritated and I had pain and cramping. I stopped taking the Fosamax one year ago. I began taking two pouches of HMS 90 / Immunocal daily in August of 1997 and in November 1999, I had another bone density test done.

THE 12/29/99 REPORT READ AS FOLLOWS:

“This patient is now mildly osteopenic with mild relative increase fracture risk, compared to young normals. Spinal bone density is still slightly lower than August, 1998. This patient is not osteoporectic at this time”.

ISN'T THIS AMAZING? I'm off a drug, which in time could have created other health problems. Thank you Dr. Bounous!

Another health issue my Doctors & I feel HMS 90 / Immunocal helped me with:

Three years ago, I was advised by my doctor that my cholesterol blood levels were increasing (6.20 mmol/l). In January of 1997, the doctor put me on Zocor (10 mg/day). By July, '97, my cholesterol decreased to 5.51 mmol/l.

Thirteen months ago in Feb. '99, I quit taking Zocor (FEARING LIVER TOXICITY). *(I do NOT recommend people quit medications without knowing what they are doing and should consult with their doctor).*

In March, my cholesterol level was 5.31 mmol/l. My doctor wanted to know what I was doing to keep my cholesterol down and of course, I told him about the Immunocal. I am thankful to be off another potentially dangerous drug. Thank you again, Dr. Bounous!

Yours Truly,

Betty McGuire
